### **What Is the Evoverse?**

Imagine an online platform where fenestration industry professionals can go to buy Personal Protection Equipment (PPE).

Now imagine that the platform features a virtual factory, with 360-degree views of the machinery used within a typical door or window manufacturing facility, as well as stylized recreations of each machine.

Then imagine if users could access each of the factory's departments; click on avatars of people working in each department; then instantly receive in-depth recommendations about the proper type of PPE for each function involved in the manufacturing process.

Finally, imagine that the recommendations provided are sorted into "good," "better," and "best" categories, based on features, performance, and price, among other factors.

The time for imagination is over. The Evoverse has arrived.

### **An Industry First**

The result of over 18 months of intensive design and development, the Evoverse is the brainchild of [EVO Systems LLC](#), the leading distribution platform serving the window, door, and insulating glass markets. The Evoverse has the distinction of being *the first interactive e-commerce environment created specifically for the fenestration industry*.

## What Is the Evoverse? (cont.)

EVO is rolling out Phase I of the platform using its PPE program as the initial offering, a natural place to start given the importance of these products in protecting the health and safety of the industry's workers. Phase II will incorporate additional services and capabilities into this dynamic platform.

Visitors to the highly intuitive Evoverse will be immersed in a virtual factory, receiving product recommendations and insight like no other resource in the industry. The wide range of high-quality protective equipment on the platform has been curated and vetted by EVO Systems in conjunction with their PPE partners.

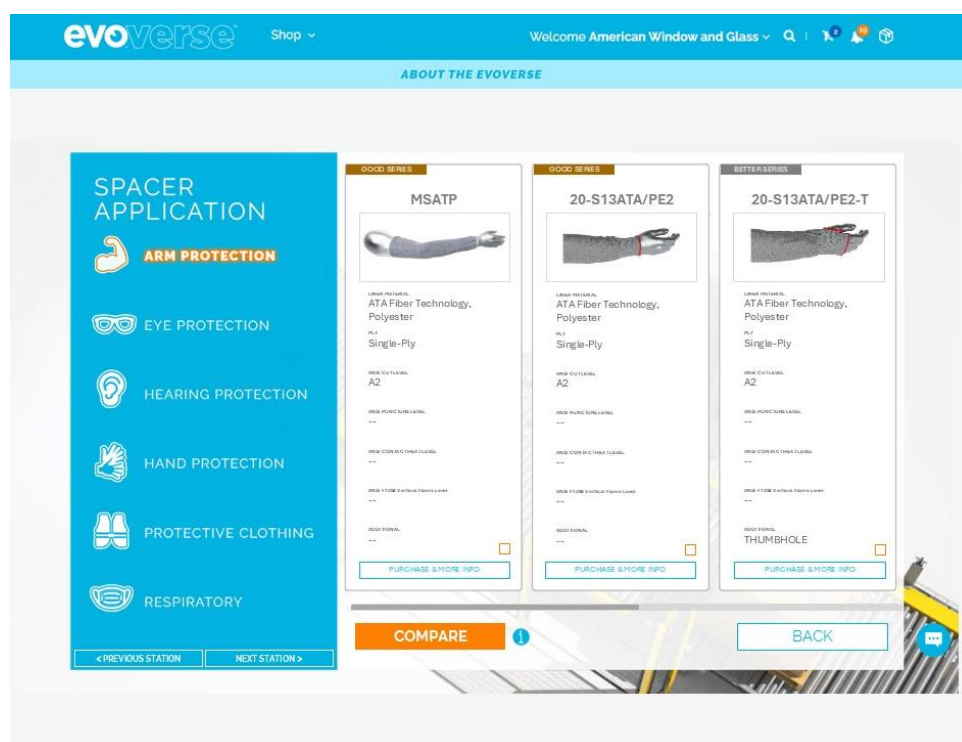

### ***PPE recommendations are ranked as "good, better, best"***

The platform's interactivity creates an educational yet entertaining journey to help customers procure PPE items that best meet their company's requirements. This is especially useful for industry newcomers, who now have a resource to gain an understanding of the PPE landscape.

The Evoverse is particularly helpful for small- to mid-sized companies, as some of these firms do not have a fulltime position responsible for safety initiatives. In such cases, the Evoverse can raise the quality of a company's health and safety effort without the need for additional hires.

The centerpiece of EVO Systems' capabilities is Cloud 9 2025, the industry's leading (and recently upgraded) proprietary platform. This robust software with rich EDI integrations was built to handle complex ecommerce functionality. Through the Cloud 9 2025 platform, the EVO team is able to manage thousands of SKUs and a high-velocity supply chain that delivers significant value to the company's customers and partners.

Cloud 9 2025 offers additional functionality including an Inventory Protection Program, ACH payments, and enhanced visibility into customer orders, invoices, and other relevant data.

## **Technology Combined with Artistry**

---

***In the Evoverse, users will find clickable representations of each machine in a typical manufacturing facility.***

---

The virtual factory at the center of the Evoverse is a technological and artistic triumph. EVO worked directly with forward-thinking software companies from around the world to create the graphical representations, based on input from numerous manufacturers. The level of detail is extraordinary.

In addition to the product categorization, the Evoverse supplies explanations of how each product was rated and assigned to its respective categories. Additional resources include sizing charts and product specification sheets. Customers can even order product samples for evaluation.
